

Hackathon Solution Pitch Deck – Guidelines

Slide 1: Solution

Present your solution as a potential startup or real-world solution.

Include:

- Team name
- Solution / startup name
- Problem Statement Number
- Team members

The slide should answer:

What are we building, and what problem are we trying to solve?

Keep it simple. The panel should understand your idea within a few seconds.

Slide 2: The Problem

Clearly establish the problem you are solving.

Include:

- What is the problem?
- Who is affected by the problem?
- Why is this problem important?
- What are the current challenges or gaps?
- Relevant data, research, statistics or real-world evidence

The slide should answer:

Is this a genuine and significant problem that needs to be solved?

Do not simply copy the hackathon problem statement. Demonstrate that your team has understood the problem and the people affected by it.

Slide 3: Our Solution

Explain your proposed solution and how it addresses the identified problem.

Include:

- What is your solution?
- How does it work?
- Key features
- What is innovative or different about your approach?
- How does it solve the specific problem identified in Slide 2?

A simple flow can be used:

Problem → Our Solution → How It Works → Expected Outcome

The slide should answer:

Why is our solution a meaningful way to solve this problem?

Avoid filling the slide with technical terminology. The panel should understand the solution even if they are not technical experts.

Slide 4: Users, Beneficiaries & Stakeholders

Clearly identify the people or organisations connected to your solution.

Include:

Primary Users

Who will actually use your solution?

Beneficiaries

Who will benefit from the solution?

Stakeholders

Who needs to participate, support or adopt the solution for it to succeed?

You can represent this visually:

User → Solution → Immediate Benefit → Wider Impact

The slide should answer:

Whose life, work, business or experience will change because of our solution?

Slide 5: Impact

This should be one of the **most important slides of your presentation**.

Do not simply state that your solution will "create impact." Explain **what will change and how you will measure that change.**

Identify 2–4 relevant impact metrics.

For example:

Impact Area	Current Situation	Expected Outcome
Cost	₹X	₹Y
Time	X hours	Y hours
People reached	X	Y
Efficiency	X%	Y%
Loss / waste	X	Y
Access	X users	Y users

The metrics will differ depending on the problem statement.

The slide should answer:

If our solution succeeds, what will be different in the real world?

And preferably:

How will we measure that change?

Important

Impact must be evidence-based wherever possible.

If you don't have actual post-implementation data, clearly distinguish between:

- **Current data / evidence**
- **Expected impact**
- **How you will validate the expected impact**

Do not present assumptions as actual results.

After Slide 5: Demonstrate What You Built

The first five slides establish the **WHY and WHAT**.

The rest of the presentation should establish:

HOW → PROOF → FEASIBILITY → SUSTAINABILITY → SCALE

Slide 6: Prototype / Demonstration -

Show the actual solution you have built.

Include:

- Prototype / working model
- Screenshots where relevant
- User journey
- Key functionality
- Actual output/result

Important: Don't just explain the prototype. **Demonstrate it.**

The demonstration should follow a real user scenario:

User Problem → User Action → System → Output → Benefit

Slide 7: Sustainability / Business Model

Think beyond the hackathon.

If this solution becomes a startup or real-world service:

- Who will use it?
- Who will pay for it?
- How will it generate revenue?
- What will it cost to operate?
- Who could be potential partners?

For solutions that are not commercial in nature, explain:

How will the solution be funded, adopted and sustained?

Slide 8: Scalability & Future Potential

Explain what happens after the prototype.

Include:

- Pilot implementation

- Target users
- Potential geographical expansion
- Additional use cases
- Future features
- Potential partnerships
- How the solution can scale

Think:

Can this solution move from a hackathon prototype to a solution used by 100, 10,000 or 1 million people?
